

1 Markdown to LaTeX Comprehensive Guide

1.1 Features at a Glance

-  **Standard Markdown Support:** Headings, lists, tables, links, images, blockquotes, and more.
-  **Text Formatting:** Bold, italic, underline, strikethrough, highlight, superscript, subscript, small caps.
-  **Code Blocks:** Syntax highlighting, inline code, executable Python code with output/plots.
-  **Diagrams:** Mermaid diagrams for flowcharts and graphs.
-  **Task Lists:** Checkboxes for to-do and progress tracking.
-  **Footnotes:** Inline and reference footnotes.
-  **Math:** Inline and display math with LaTeX syntax.
-  **Definition Lists:** Term-definition pairs.
-  **Tables:** Pipe tables, captions, and alignment.
-  **Alerts Containers:** Note, tip, important, warning, caution, box, and alignment containers.
-  **Custom Extensions:** Center/right alignment, keyboard shortcuts, line breaks, and more.
-  **Metadata Variables:** JSON metadata, document variables, and title page templates.
-  **Emoji Support:** Use emojis anywhere in your markdown for expressive documents! 🤗

## 2.13 Math Expressions

### 2.13.1 Inline Math

This is inline math:  $E = mc^2$

markdown

This is inline math:  $E = mc^2$

### 2.13.2 Display Math

```
$$
\int_{0}^{\infty} e^{-x^2} dx = \frac{\sqrt{\pi}}{2}
$$
```

markdown

$$\int_0^\infty e^{-x^2} dx = \frac{\sqrt{\pi}}{2}$$

## 2.14 Footnotes

### 2.14.1 Inline Footnote

Text with inline footnote<sup>[This is the footnote content]</sup>.

markdown

## 2.18 Container Alerts

### 2.18.1 Note Alert

```
 ::: note
This is a note alert with blue styling.
 :::
```

markdown

#### NOTE

This is a note alert with blue styling.

### 2.18.2 Tip Alert

```
 ::: tip
This is a tip alert with green styling.
 :::
```

markdown

#### TIP

This is a tip alert with green styling.

### 2.18.3 Important Alert

```
 ::: important
This is an important alert with purple styling.
 :::
```

markdown

#### IMPORTANT

This is an important alert with purple styling.

### 2.18.4 Warning Alert

```
 ::: warning
This is a warning alert with yellow/orange styling.
 :::
```

markdown

#### WARNING

This is a warning alert with yellow/orange styling.

### 2.18.5 Caution Alert

```

::: caution
This is a caution alert with red styling.
:::

```

markdown

#### CAUTION

This is a caution alert with red styling.

## 2.19 Text Alignment Containers

### 2.19.1 Center Alignment

```

::: center
This text is centered
:::

```

markdown

This text is centered

### 2.19.2 Right Alignment

```

::: right
Right-aligned text
:::

```

markdown

Right-aligned text

## 2.20 Box Container

### 2.20.1 Basic Box

```

::: box
Text in a bordered box
:::

```

markdown

Text in a bordered box

## 2.21 Executable Python Code Blocks

The converter supports executing Python code blocks directly within your markdown and including their output or generated plots in the final PDF.

### 2.21.1 Prerequisites

For Python code execution to work, you need Python installed on your system. To generate plots with matplotlib, install the required packages:

powershell

```
python -m pip install matplotlib numpy
```

### 2.21.2 Available Properties

- `.execute` - Execute the code block (required)
- `.show-code` - Display the source code in the output
- `.show-output` - Display execution output/plot (default)
- `.hide-code` - Explicitly hide the source code (default)
- `.hide-output` - Hide execution output/plot

### 2.21.3 Examples 1

markdown

```
```python {.execute}  
print("Hello, World!")  
```
```

output

```
Hello, World!
```

### 2.21.4 Examples 2

markdown

```
```python {.execute}  
import numpy as np  
import matplotlib.pyplot as plt  
  
r = np.arange(0, 2, 0.01)  
theta = 2 * np.pi * r  
fig, ax = plt.subplots(  
    subplot_kw = {'projection': 'polar'}  
)  
ax.plot(theta, r)  
ax.set_rticks([0.5, 1, 1.5, 2])  
ax.grid(True)  
plt.show()  
```
```

## 2.22 Document Metadata (JSON)

Document metadata is configured in a separate JSON file:

```
{
 "title": "Document Title",
 "subtitle": "Course Name",
 "submittedto": "Professor Name",
 "university": "University Name",
 "department": "Department Name",
 "date": "January 1, 2024",
 "submittedby": [
 {
 "name": "Student Name",
 "roll": "Registration Number"
 }
],
 "titleTemplate": 1,
 "enableContentPage": false,
 "enablePageCredits": false,
 "moveFootnotesToEnd": false,
 "enableThatsAllPage": false,
 "tocDepth": 3,
 "variables": {}
}
```

### 2.22.1 Title Template Modes

The `titleTemplate` setting controls how the title page is displayed:

- **0** : No title (disabled)
- **1** : Full university title page with logo (default) - Good for assignments and reports
- **2** : Title header above content - Good for notes
- **3** : Title on separate page - Good for when the contents are enabled

### 2.22.2 JSON Variables

You can define variables in the JSON metadata file and use them throughout your markdown document. Variables are defined under the `"variables"` key and referenced using `{{variable_name}}` syntax.

**Example JSON with variables:**

```
{
 "variables": {
 "author": "abd",
 "version": "1.2.3",
 "course": "CS 101",
 "semester": "Fall 2025",
 "university_full": "University of Engineering and Technology"
 }
}
```

```
This report was written by {{author}} for {{course}} during {{semester}}.

Software version: {{version}}

Institution: {{university_full}}
```

This report was written by abd for CS 101 during Fall 2025.  
Software version: 1.2.3  
Institution: University of Engineering and Technology
